Professional Summary

Backend Engineer & AWS Solutions Architect. I build scalable, reliable systems – from API design to cloud deployment. Passionate about clean architecture and team collaboration.

Soft Skills

- Cross-functional collaboration - Version control proficiency - Clear technical communication
- Strong stakeholder rapport - Receptive to feedback & new approaches - Problem-solving ownership
- Continuous learning mindset

Education and Training

Institution	Qualification	Year Obtained
ALX Africa – AWS	Solutions Architect Associate	Oct., 2025
ALX Africa – AWS	Cloud Practitioner	June, 2025
ALX Africa	Professional Foundation	April, 2025
Jobberman	Soft-Skill Training	July, 2020
Tai Solarin University of Education	Diploma – Computer Engineering	Dec., 2012

Tech Stack

AWS, Python, Rust, Go, Node.js, Java, Django, Fast API, Axum, Gin, Express.js, Nest.js, Spring Boot.

Technical Skills

Programming Languages	Frameworks/Libraries	Databases	Cloud & DevOps
Python	Django, Fast API	PostgreSQL	Docker
Golang	Gin	MySQL	CI/CD Pipelines
Rust	Axum	MongoDB	
Node.js	Express, Nest.js	Redis	
Java	Spring Boot		

Work Experiences

1. **Leadway Assurance Company Limited**, **2025 – Till Date**.

   Role: ***Backend Engineer (Full-time)***

   Responsibilities:

   i. Design and maintain scalable backend systems that power broker and client portals, ensuring 99.9% API reliability and seamless real-time data synchronization.

   ii. Build and optimize RESTful APIs handling high-volume policy and claims data, reducing average response time by improving query efficiency and caching strategies.

iii. Implement robust authentication, role-based access control, and audit logging to meet financial industry compliance requirements.

iv. Collaborate with DevOps to deploy and monitor services on Azure, leveraging CI/CD pipelines for zero-downtime updates.

v. Refactor legacy modules into modular, testable services, increasing code maintainability and reducing bug recurrence.

2. OnlyDust, Drips and GrantFox - Open-Source Platforms, 2024 – Till Date.

Role: ***Maintainer (Part-time)***

Responsibilities:

i. Maintain a production-grade backend repository, reviewing 30+ pull requests and resolving 50+ issues from a global community of contributors.

ii. Enforce code quality standards through rigorous PR reviews, automated testing, and adherence to architectural patterns (e.g., clean architecture, dependency injection).

iii. Guide the project's technical roadmap, making key decisions on API design, database schema evolution, and error handling strategies.

iv. Mentor new contributors, reducing average PR review turnaround time by 40% through clear documentation and constructive feedback

v. Advocate for best practices including unit/integration testing, structured logging, and secure authentication flows.

3. De-Extralucid Tech World 2018 – 2024

Role: ***Backend Engineer (Full-time)***

Responsibilities:

i. Delivered backend solutions for **multiple client projects** across industries including finance, e-commerce, and logistics – translating business requirements into reliable, production-ready systems.

ii. Designed and implemented **RESTful APIs** that served as the backbone for client-facing web and mobile applications, ensuring seamless data exchange and third-party integrations.

iii. Architected and managed database schemas (PostgreSQL, MongoDB) with a focus on query performance, data integrity, and scalability under growing client workloads.

iv. Optimized both backend performance and frontend integration, reducing page load times through efficient API responses and caching strategies.

v. Collaborated directly with **client stakeholders** and internal cross-functional teams (designers, frontend engineers, QA) to refine requirements, manage expectations, and deliver on time.

vi. Implemented **version control workflows** (Git/GitHub) and basic CI/CD practices, enabling faster iteration and reliable releases for client-facing applications.

vii. Maintained legacy client systems while progressively refactoring them into modular, testable codebases – reducing technical debt and support tickets.

Projects

- **Parcel App:** A multi-channel commerce, delivery, and operations platform built on a microservices architecture (Django, Spring Boot, Next.js) and fully deployed on AWS with Terraform, enabling seamless product discovery, checkout, parcel dispatch, courier workflows, vendor operations, and administrative control across web, mobile, and admin surfaces.

- **Funkey Grab and Bite:** A full-stack, cloud-native food commerce platform (Go/Gin backend, React/Nuxt frontends, PostgreSQL, Redis, and AWS deployed with Terraform) that unifies customer ordering, promotion engines, inventory management, and real-time admin operations into a scalable digital ecosystem for modern fast-food and catering businesses.

- **Carbon Scribe:** An end-to-end carbon credit tokenization and real-time retirement platform built on Stellar/Soroban (Rust smart contracts, Next.js frontends, and multi-layer satellite/IoT verification) that transforms regenerative agriculture and forestry projects into programmable carbon assets with instant, transparent on-chain retirement for corporate buyers.
